MATHIS LE PORT

Engineering Student — Algorithms & Software Engineering

Organised, curious, adaptable and efficient, with a genuine appetite for understanding how things work. Willing to discover, accept and put new ideas into practice, I approach every new challenge with enthusiasm and an open mind. Able to communicate well with people at all levels, I work equally well independently or as part of a team, and I always aim to deliver work to a high standard.

Position applied for: engineering internship or first engineering position in software development — geometric optimisation and nesting (Alma – R&D, Grenoble / Saint-Martin-d'Hères). The role combines algorithm design, computational geometry and combinatorial optimisation with hands-on software engineering, aimed at reducing material waste and improving production efficiency.

PROJECTS

Graphical Interface System in C — Ensimag (Team project) 2026

Recreated a graphical interface system in C: an event loop handling user input (clicks, resizing) and drawing of window widgets through a low-level graphics library, with full manual memory management using pointers.

C · Event-driven programming · Memory management · Graphics programming

Towers of Hanoi — personal project 2026

Modelling of the puzzle as a state-space graph and recursive resolution over that graph in Python, with visualisation of the graph and solution, and tests validating the results.

Python · Recursion · Graph algorithms · Testing

Applied Math Project — Ensimag (Team project) 2025

Implemented and compared matrix factorisation methods for recommendation systems, analysing convergence and recommendation accuracy.

Applied mathematics · Algorithms / Programming

TIPE — CPGE 2025

Study of the induction phenomenon applied to dynamic charging of electric vehicles.

Physics · Programming / Python data visualisation

EXPERIENCE

Human Resources Director — Nsigma 2025 — present

Junior-Entreprise of Ensimag

Engineering Intern — Institut Clément Ader Jun — Jul 2026

Automated screening of application dossiers · Toulouse

- Developed a local ATS prototype for automated application screening.
- Built multi-format document extraction pipelines for PDF, scans and DOCX.
- Designed semantic matching between applications and job descriptions using RAG / LLM agents.
- Implemented an explainable ranking model with CatBoost and SHAP.

Python · FastAPI · React / TypeScript · RAG / LLM agents · CatBoost / SHAP

Cordées de la Réussite 2023 — 2024

Support for People with Disabilities

Town hall · Judo club

EDUCATION

Grenoble INP — Ensimag 2025 — present

Engineering studies — Mathematics & Computer Science

- Combinatorial optimisation
- Visual computing

Lycée Antoine Bourdelle 2023 — 2025

CPGE PTSI (Physics, Technology, Engineering Sciences)

SKILLS

Programming: Python, C, Java, Go, R, SQL

Software: Git / GitLab, Docker, Linux / Bash, CI/CD

Web: HTML / CSS, React / TypeScript, FastAPI

Graphics: OpenGL, Blender

ML / AI: CatBoost, SHAP, RAG / LLM agents

Other: LaTeX, Microsoft Office / Canva

LANGUAGES

- French — native
- English — B2
- Spanish — B2

INTERESTS

Research · Artificial intelligence · Fundamental mathematics · Quantum · Sport · Literature
